

APPLICATION GUIDE

APPLICATIONS

IMPORTANT: Many custom built, and modified vehicles often use spindles and axles that were not original equipment for that car. The kits listed in this catalog are arranged by spindle and axle type, and not necessarily by any specific vehicle model. It is important that the customer make a kit selection based on the spindle or axle being used. Diagrams to assist with common rear axle identification can be found on pages 4 and 31.

1. Once the spindle or axle has been identified, use these charts to find the available kit types and the associated kit group number. When a particular kit type is available for an application, the kit description, group number and ordering information page number will appear on the chart.
2. Proceed to the kit description page to determine the suitability and order part number of the kit required.
